

HOW DO YOU KNOW IF YOU'VE BEEN hacked?

YOUR FRIENDS TELL YOU

They've received a spammy or phishy e-mail from your email account, social media, messaging apps, or SMS.

YOUR BROWSER TELLS YOU

Unwanted browser toolbars, homepages, or plugins appear unexpectedly. You're seeing lots of pop-ups or web page redirects. Your online passwords don't work.

YOUR PHONE TELLS YOU

Battery and data usage are higher than normal. Charges for premium SMS numbers show up on your bill.

YOUR EMAIL TELLS YOU

You receive a notification from a company that has recently suffered a cybersecurity breach.

YOUR BANK TELLS YOU

You receive collection calls. There's money missing from your bank account. You get messages and receipts for things you didn't buy.

YOUR SOFTWARE TELLS YOU

New accounts appear on your device. Your antivirus software pulls up red alerts. You get messages from software you don't recall installing. Programs crash randomly.
